Buying Guide Includes:

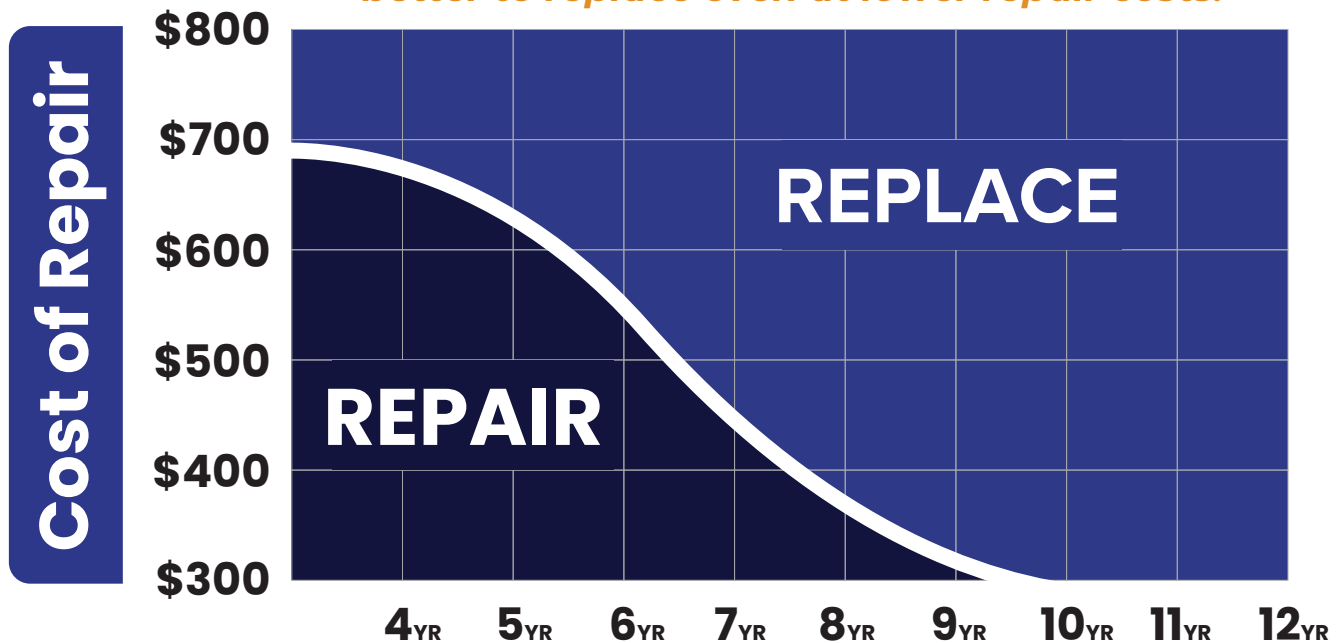

- 💧 When to purchase a new system
- 💧 Tank versus tankless water heaters
- 💧 The best water heater brands

The Right Time to Buy?

To help decide whether purchasing a new water heater is better, compare the cost of repair versus replacement.

As the system ages, it becomes better to replace even at lower repair costs.

When to Repair or Replace

Investing in a failing water heater can become more expensive than replacing it, particularly when frequent repairs are necessary. Transitioning to a more energy-efficient water heater can result in long-term savings by reducing repair expenditures and energy bills.

Four Signs For Replacement

Here are the top three reasons to purchase a new water heater

- ! Age of the water heater
- ! Inconsistent water temperature
- ! Higher energy bills
- ! Rusty water

Tankless vs. Tank

Choosing a water heater for your home can be hard. Here we'll explain whether a tankless or tank water heater is best for your home.

Tankless

Tank

 Average lifespan of 15 years	 Average lifespan of 8-10 years
 "On-demand" supply of hot water	 Stores hot water according to tank size
 Lower energy bills each month	 Lower upfront costs

So Which Should I Pick?

Tank

Because of their set supply of hot water being limited to the size of the water heater's tank storage, these water heaters are best for small to medium sized families.

Tankless

Because of their never-ending supply of on-demand hot water, these water heaters are ideal for those with bigger houses or large families. They are also recommended for houses with a hot tub or soaking tub.
